AWS Lambda Service Delivery Program Certification:

Supporting DX promotion by utilizing serverless architecture

TOKAI Holdings Corporation announces that TOKAI Communications Corporation, a TOKAI telecommunications subsidiary, has become the eighth company in Japan to acquire AWS Lambda Service Delivery Program certification from Amazon Web Services (hereinafter referred to as "AWS").

The AWS Service Delivery Program certifies AWS partners that possess deep technical knowledge and experience and that have a proven track record with regard to providing customers with specific AWS services. We received this certification in recognition of our track record in, and knowledge of, systems development and migration using serverless architecture that can run program code without the need to build a server.

There has been a recent increase in customers considering the introduction of serverless architecture that can optimize the costs associated with cloud use, as part of their promotion of digital transformation (DX) to improve their corporate competitiveness. We intend to meet our customers' needs with more optimal cloud solutions from comprehensive and multiple perspectives, using the knowledge and know-how that we have cultivated as a systems integrator and now as a partner with multiple AWS certifications.

We will continue working to contribute to our customers' business by providing comprehensive solutions for all processes from AWS introduction to operation, including everything from AWS introduction consulting to systems development, infrastructure building, circuit connections, and monitoring.

■About AWS Lambda

AWS Lambda is an event-driving computing service without the need for servers that can run program code for practically all types of applications and backend services without the need for server provisioning (work to allocate or configure resources when a server is used) or management.

Since AWS Lambda only charges customers for the hours and number of times it is called as well as the memory size allocated when called, fees can be greatly reduced depending on how often it is run, thus promising cost savings. For more details, see the website below.
